Milestone 2

We will be using trello to track the progress of our project. Our project plan/sprints:

1. Should be finished by March 21st (due date of milestone 3). Complete tutorial to get a little background on JavaScript (https://www.codecademy.com/learn/javascript). Also, completed database setup.
2. Should be finished by the date of our milestone 4 demo (April 5th-13th). We will need to have some HTML, JavaScript, and PHP written for this sprint. This sprint will include setup of our user interface for the website (page design/development) and implementing use of a hosting service for the website.
3. Should be finished by April 18th (milestone 5 due date). Includes set up of user accounts (username/password) as well as implementation of scheduling pages that will connect the users.
4. Should be finished by the date of our milestone 6 presentations (May 1st-5th). All testing and debugging should be completed.
5. Complete milestone 7 requirements.

Agile Standup Meeting 1 Overview

Allison: I worked on setting up a plan for our 5 sprints, and including them in trello. The next thing I'll work on is the javascript tutorial.

Sam: I've been working on the javascript tutorial and am planning to work on an HTML tutorial as well.

Matt: I found a web hosting site that integrates a MySQL database that allows hosting of HTML files and created a Hello, World program (**meetingmasters.000webhostapp.com/index.html**).

Yifeng: I started learning javascript and HTML, and helped with the plan for the sprints.

David: I picked a project management tool (trello) and set up it up to include the group. I then added the functional and non-functional requirements for our project (product backlog).

Retrospective Meeting Summary

We haven't had an official sprint yet, but we decided that we did a good job of planning our sprints.

User (Functional) Requirements

- Meeting master proposal page design
- Scheduling page(s) design
- Scheduling page(s) development
- Create logins

Add a card…

Non-functional Requirements

- Invite email system
- Create hosting service for website
- Extra – notification center support
  - 💬 1
